

PLATFORM SOLUTIONS -

McNealy Brown Limited as the principle manufacturer and installer launched in conjunction with Platform Solutions a bespoke service tailored specifically to the requirements for those clients who procure platform renewals and extensions.

Being fully cognisant of the potential hazards within the platform environment the innovative designs allow for a fast response and cost effective solution.

The platform designs allows for the galvanised supporting structure assembly to be constructed in a green zone, allowing significant lengths of platform to be rapidly positioned during possessions onto existing or newly prepared concrete foundations.

Incorporated into the design is allowance for alternative decking finishes, standard installation includes conventional copers, tactiles and slabs on a special purpose flame retardant steel reinforced polymer panel.

Other options allow for the use of tarmac or a purpose made lightweight resin encapsulated birch plywood decking panel incorporating the required finishes as standard.

Additional features include integral fencing, full canopy options, built in drainage and service ducts, together with fixing points for platform lighting or furniture.
